# ALLFI Training Program

## Training Program

ALLFI owns a technology center in Germany near Hannover. In addition to component testing and the processing of job shop orders, training courses in the field of waterjet technology are offered. The range of training includes product training on ALLFI components and training in waterjet cutting. The content of each training course is adapted to the needs of the customer.

## Features of Product Training

- Training of basics in handling high pressure components
- Explanation of the structure and the functional principle of the respective assembly
- Practical exercise of maintenance processes

## Features of Basic Training

- Introduction to the basics of waterjet cutting
- Explanation of physical relationships
- Technology-oriented programming of a part
- Selection of the corresponding parameters
- Cutting on machine in different qualities
- Explain/show various functions: Lead In – Piercing – Delays
- Cut with different types of abrasives
- Technology specific characteristics
- Special materials – tips for economical cutting

The basic training has a time frame of two days. It can be given for an individual or for groups of up to 4 persons. If special questions are to be covered in more detail e.g. with practical cutting tests, it is possible to extend the training course by an additional day if necessary.
